ICX tablets from

ICX waterline treatment tablets from A-dec offer you a unique and effective way to maintain clean dental unit waterlines.

Simply add one tablet to an empty self-contained water bottle before each filling, and as the tablet dissolves it releases ingredients into the water which help prevent the build-up of deposits and contaminants.

Measuring or mixing is not required - the effervescent ICX tablet does the work for you.

Best of all, ICX continues working in the system with each treatment. This protects the waterlines from further contamination and reduces (or may even eliminate) the need for frequent shock treatments.

From Adec, but can also be used with most other dental equipment, including Anthos, Belmont, Dentalez, Forest, Tridac etc.

Since the concentration of ingredients in the water remains very low, ICX won't harm your team, your equipment or your patients.

Have peace of mind with ICX, knowing your waterline maintenance is not only easy and effective, but also safe!
